

ALIM ACADEMY'S FIRST TRAINING OF THE YEAR — AND OUR FIRST EXTERNAL SESSION IN KUCHING.

Wednesday, 14 January 2026,
We're excited to begin **ALiM Academy's** first training of the year with an important highlight — our **first-ever external training session in Kuching!**

Today's programme on the **Design and Application of Glass Fiber Reinforced Polymer (GFRP)** brings together industry professionals for an insightful afternoon of learning, technical knowledge-sharing, and real-world applications based on **ACI codes**. The session is led by **Huang Mei Si**, inventor of Malaysia's eco-friendly GFRP rebar, **STARBAR™**, whose extensive experience in GFRP innovation, industry standards, and sustainable construction provides valuable practical insights aligned with today's training.

From understanding GFRP behaviour to exploring real project case studies, the session reflects our **commitment to advancing sustainable and innovative construction practices across Malaysia.**

ALIM ACADEMY'S FIRST TRAINING OF THE YEAR — AND OUR FIRST EXTERNAL SESSION IN KUCHING.

This training marks the beginning of **ALiM Academy's** learning journey for the year, and we look forward to bringing more impactful programmes to different regions nationwide.
